## PROFESSIONAL EXPERIENCE

---

### ELI LILLY

**Software Engineer (Part-time/Zero-Hour)**

**Software Engineer (Placement)**

Bracknell, UK

AUGUST 2025 - Present

JULY 2024 - AUGUST 2025

Contributed to multiple high-impact projects across LLM infrastructure, internal tooling, and full-stack development during a year-long software engineering placement at Eli Lilly.

- Deployed LLM-powered classification models for identifying Adverse Events and Product Complaint, improved automation, reduced manual triage workload, and delivered scalable model execution pipelines
- Designed and implemented a token-based redaction model to improve PHI redaction accuracy over traditional regex systems and increased precision in detecting sensitive entities in medical texts
- Automated model performance reporting using Python and Temporal.io; introduced dynamic configurations to support new models with 60% less manual effort
- Optimized AWS Textract-based OCR workflows for the Data Extraction Service; improved form/table parsing reliability and reduced pipeline errors
- Built and maintained components of an internal Next.js employee portal; enhanced UX, implemented Graph/ JIRA and Workday API integrations, and streamlined CI/CD workflows
- Led portal redesign sprint and delivered new features under tight timelines and promoted better team velocity

### PROMTRON SOLUTIONS A.S

Prague, Czech Republic

Intern

2022-2022

Completed a business-technology internship at PromoTron, a cloud-based B2B platform serving the promotional product sector. Designed a tailored partner-company database to streamline strategic collaborations, aligning with company objectives.

- Designed and implemented a structured database of potential partner companies based on market fit, service alignment, and business priorities
- Improved lead targeting and reduced manual filtering by identifying high-potential collaborators using defined business logic and sector-specific criteria
- Gained experience in professional stakeholder communication, aligning technical work with commercial goals and presenting findings to senior team members

## PERSONAL PROJECTS

---

### LOCKD

2024-2025

A collaborative photo album storage system using Next.js that enables multiple users to contribute to shared albums.

Implemented a custom Edge AI sentiment analysis model to evaluate the positivity of album titles, enhancing user engagement through intelligent feedback.

- Used NextAuth with OAuth (Google) for secure login
- Managed user data with Prisma and images with AWS S3

### BUS TIME PROVIDER

2023

Developed a web scraper to extract live Oxford bus service times and deliver real-time updates through messaging platforms such as Discord. Addressed the lack of persistent reminders in the original service by automating notifications to improve user experience.

- Integrated with the Discord API to automate timely notifications and reminders for bus arrivals
- Exploring embedded systems to build a compact, standalone display using Arduino or Raspberry Pi

## EDUCATION

---

### OXFORD BROOKES UNIVERSITY

Oxford, UK

*BSc (Hons) Computer Science*

2022-2026

**Overall Grade: 1st class/4.0 GPA as of 2nd year**

- Modules Learnt: Object Oriented Programming, DevOps, Mathematics for Computing

## ADDITIONAL INFORMATION

---

- Languages/Tools: Java, Python, Typescript, React Native, HTML,CSS,Javascript, FastAPI, Temporal
- Certifications: AWS Solutions Architect - Associate
